

Enhance Quality of Care by Providing Access to Medical Records

With emrAnyWhere, patients can:

- ✓ *Get access to clinical documents, lab results and reports in real-time*
- ✓ *Easy and Hassle-free Medical History Download*
- ✓ *Keep track of Missed / Due Vaccinations*
- ✓ *Access Relevant Education Material from the Web*
- ✓ *Easily communicate with doctors, request prescription refills and much more...*

Engaging Patients AnyWhere

The rapid growth in Mobile Usage requires the Providers to rethink their patient engagement model. Even Portals are no longer effective in keeping patients involved as they are constantly on the move.

Introducing the perfect App for these changing times

emrAnyWhere

Bring the Patient Portal to the Phone

Embrace the mHealth Future

Integrated to EMRs using HL7 / Direct / APIs
Gen Z is all about Mobile devices

mHealth

Educating and Raising Awareness among Patients

Archaic models are no longer acceptable when it comes to engaging patients in their own healthcare process. It is imperative for health providers to integrate mobility into their daily workflow.

emrAnyWhere enables every patient to take charge of their personal well-being. This in turn results in better diagnosis and treatment, lower healthcare costs, and more informed consumers. That's exactly the need of a connected healthcare community.
